**Values in Reading Textbooks for the First Four Elementary Years in Jordan
Between 1990 and 2000: A Comparative Study**

*Rateb Q. Ashour**

ABSTRACT

This study aimed to know the kinds and the rate of values in textbooks for the first four elementary years between 1990 and 2000. The following questions were to be answered: Which values are found in these textbooks? How much is the rate of each of these values in each book?

For this propose, the researcher developed a classification for this study, which was discussed by judges.

The researcher analyzed the contents of the books depending on the THEME, which was used by different studies of values. The study revealed many results: The textbooks contain eight kinds of values in different rates. This distribution doesn't depend on a special system. The general result for this study revealed that the distribution of values doesn't follow a special system. There is a necessity for pre-planning and knowledge of the kinds of values and their existence according to stage and class.
