A Juristic Linguistic Study on the Verse of Polygamy

*Mohammad Al-Hawari, Abdul-Aziz Ali**

ABSTRACT

The paper touches upon the close relationship between the Arabic language and Islamic Sharia through exploring the Quranic verse of marriage issue and marriage to more than one wife at the same time (polygamy). The introduction has shown the close relationship between Islamic Sharia and Arabic, the tool of knowledge and jurisprudence in Islam.

The first chapter shows the reason behind revealing the verse of polygamy, opinions about it, and the reason behind revealing the verse of orphan women. The chapter shows vocabulary reference and finally the role of all of this in inferring juristic rules of the above mentioned verse.

The second chapter talks about the absolute issue reference away from showing opinions of linguists and jurists. It also talks about rules of marriage in Islam and opinions of jurists depending on the bare-proof absolute issue. The chapter concluded that marriage in Islam in case of ability of fearing adultery is preferable.

The third chapter tackles conditional reference in the above-mentioned Quranic verse where there are two conditions and two effects as well. The first is to marry a non-orphan woman if marriage is unjust to her or whether she is unwanted. The second is about getting married to one woman only if the wives won't be done equal justice. The chapter exposes opinions of jurists as to the number of wives. The chapter thus showed restrictions of polygamy.

Keywords: Issue Reference, Marriage, Rules of Marriage, Conditional Reference, Polygamy, Polygamy Restrictions, the Relationship between Arabic and Islamic Sharia.
